ASIDE FROM THE FOUR BASIC SUBSTRATE application details that we have illustrated in our Installation Procedures brochure, often we are asked for additional construction details for our architectural stone veneers. The following sixteen diagrams are ideas for when stone termination is needed. Compiled from the finest architect's and developer's drawings, these details are the creative solutions you need to finish a job right the first time.

When Eldorado Stone architectural stone veneers are used in conjunction with our corner components, a variety of simple, cost-effective solutions are possible. These drawings show how depth, dimension and believability can be achieved by following a few tricks of the trade and a few simple steps. What you'll get in return is a job well done with Eldorado Stone architectural stone veneers.

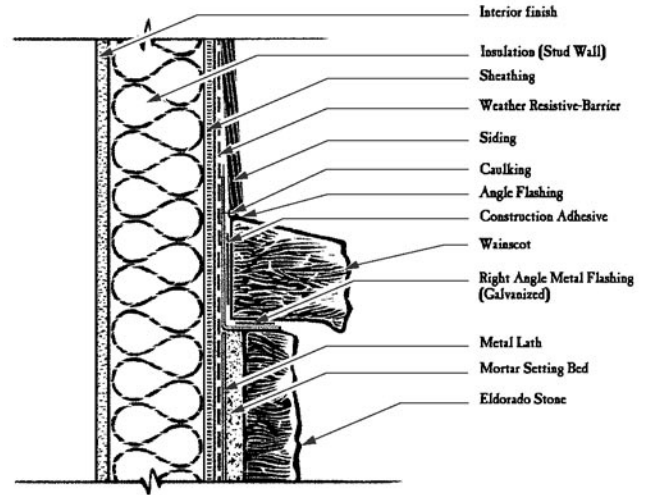

Creative detailing solutions from Eldorado Stone. The difference between pasting stone on to a surface and working with stone so that it becomes an integral component of a structure. It doesn't take a trained professional to notice the difference.

Eldorado Stone. See it and Believe it.™

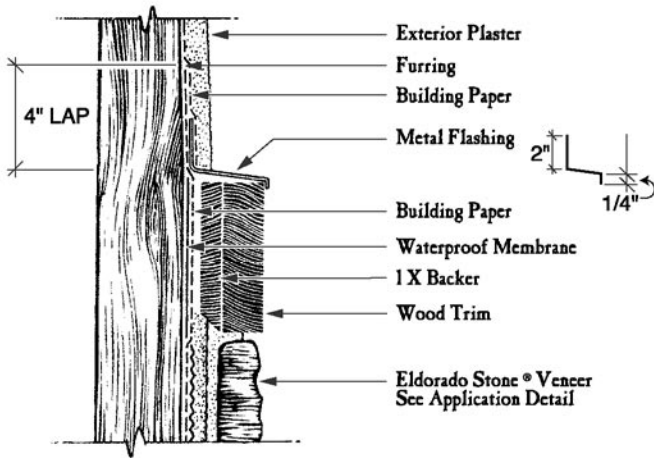

Note: These construction details are provided as ideas for solutions to architectural designs. They will not necessarily apply to the specific design circumstances you may encounter. These construction details may, and probably will, require changes to meet your particular design requirements. Manufacturer accepts no responsibility or liability for the use of these or other construction details.
